

Each year in the UK, over 3,000 babies die before their first birthday. Sparks funds research into serious conditions affecting the health of babies, children and mums-to-be.

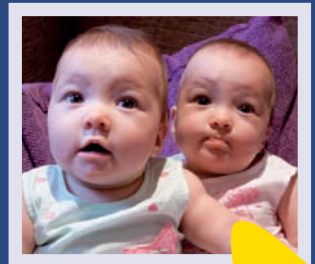

Our research aims to improve the quality of life for children and families affected by serious illness or disability today, whilst seeking ways to better diagnose, treat and prevent these conditions in the future.

We work with leading doctors and research teams in the UK to ensure we fund the highest quality research with the greatest chance of saving and changing lives forever.

Sparks has already invested over £22 million to finance more than 230 medical research projects into conditions affecting babies, children and mums-to-be. We fund research across the whole spectrum of paediatric medicine, including childhood cancers, childhood arthritis, meningitis, clubfoot, cerebral palsy, spina bifida and the risks associated with premature birth.

The medical breakthroughs we make possible make a difference not only across the UK but for thousands of children and families around the world. But to do this we need your help.

Our research saves lives. So can you.
