

## MISSION

To establish permanent access to orthopedic rehabilitative services in the rural parts of developing countries through direct patient care and by clinical training of locals, especially women while maintaining long term relationships.

## Our Vision

Sustainable rehabilitation supporting people with disabilities in rural Kenya by involving the families and community health care providers

The established rehabilitative centers would provide therapy services, education and employment to the people in the rural communities.

## What is the need?

There is lack of:

- Rehabilitation education and training in rural areas for orthopedic and neurological developmental disabilities
- Manual physical therapy, wound care, patient education, orthotics, and the fabrication of prosthetics to meet the diverse needs of its patient population
- Clinical treatment in rural health clinics
- Disability prevention in case of emergency or disaster, especially in the rural
- Public awareness of disabilities and rehabilitation
- Orthotics and fabrication of prosthetics for populations with disabilities

## OUR FOCUS

Rehabilitation education and training

- Clinical treatment
- Disability prevention
- Increasing public awareness of disabilities and rehabilitation
- Education and promotion of physical therapy/physiotherapy amongst locals
- Building bridges with local universities and colleges that establish internships in rural settings
- Continuous long term relationships with the rural communities

### COMMUNITY BASED REHABILITATION

- Advocacy
- Employment and training
- Human Service
- Community Rural Development
- Education/training
- Healthy
- Systems change
