

# Precious Primates

Chimpanzee

**Did You Know?** Chimpanzees feed on a variety of plants, insects, meat and fruit. They even help to disperse fruit seeds in their dung.

## You can protect primates by:

1. **Planting trees:** Plant trees near your home for harvesting wood, leaving forest trees for animals to use for food and shelter.
2. **Observing:** Learn about the animals around you by quietly watching them and sharing what you learn.
3. **Picking up rubbish:** Pick up any rubbish near the forest and near your home to maintain a healthy environment for people and animals.
4. **Contacting authorities:** If you see a primate being harmed, sold or kept as a pet, notify authorities or a nearby PASA sanctuary. Remember, **wild animals never make good pets!**
