Better Building in West Africa
Empowering People through Sustainable and Affordable Housing
“Of course we will teach people how to fish instead of giving them the fish. But we will also teach them how to repair the net and sell the fish.”

Thomas Granier, Founder and General Director
The Nubian Vault Association’s (AVN) mission is to improve economic and housing conditions through appropriate architecture and vocational training for as many people as possible.

Housing is vital, yet over half of the Sahel’s population (100 million people) lacks access to decent housing. Poverty, demography, the deforestation-led disappearance of natural timber resources used in traditional architecture and urban growth prevent access for millions of families to decent housing.

The Nubian Vault (NV) is an ancestral construction technique, originating in Upper Egypt, using only raw earth bricks and earth mortars. It represents a sustainable and affordable alternative to the roofing sheets that are today widespread in West Africa.

Steps of market transformation:
- Endogenous adoption of the NV concept
- Availability of the NV on the housing market
- Continuous growth of the NV market
- Resolution of the housing problem over time
The Nubian Vault technique

A Nubian Vault is:

- More durable: a Nubian Vault has thick walls, is resistant to rain, and is passed on from generation to generation;

- More comfortable: it provides thermal, acoustic, aesthetic and usage comfort, and offer an option of traditional terraced roofs and two-storey houses;

- More ecological: no wood or straw, no production or transport of imported materials (corrugated metal sheets, cement, steel rafters) and thermal stability limiting the need for air-conditioning;

- More economical: up to 50% less expensive than other building techniques for the basic structure;

- More adapted to the local economy: only local labour and materials are used, clients are directly involved in the building, costs are re-injected into local circuits;

- Easy to reproduce: simplified and standardized, the technique can be learned by anyone, with no particular educational requirements and only basic tools. Its simplicity and standardization also guarantee stability and durability.

AVN’s market-based approach

AVN is a social and green non-profit with an integrated programme answering multiple issues:

**A Roof**
Sensitization to the NV architectural concept, and support to kick-starting local NV markets, both public and private, rural and urban.

**A Skill**
Boosted technical and entrepreneurial training of a local workforce and technical expertise for the emergence of a dynamic sustainable construction sector.

**A Market**
Fostering a supportive institutional context for the Nubian Vault solution through advocacy and adapted financial tools.

AVN is involved as a market facilitator: AVN does not build or donate houses, but it contributes to the emergence and growth of a self-sustained housing market for the NV, enabling its local appropriation.

“**A Nubian Vault is like a family name. It stays in the family and is attached to it. Nubian Vaults mean security and employment for our children. We will do everything to encourage the other villagers to build Nubian Vaults and push their children to get trained as NV masons.**”

Mrs. Ekobié, leader of a women’s group in Burkina Faso
AVN’s 14 regional teams in West Africa are composed of 60 people active in deploying the programme over five countries: Burkina Faso, Mali, Senegal, Benin and Ghana.

To date, AVN’s programme has enabled:

- 2,000 buildings (79,000 m²)
- 440 NV masons trained
- 400 apprentices in training
- 65,000 tonnes of CO₂ equivalent potentially spared
- 800 towns and villages with at least 1 NV built
- 2.7 million USD generated into local circuits
- 30% annual market growth (in average)
- 24,000 end-user beneficiaries living or working in Nubian Vault with significantly improved conditions

AVN’s programme offers not only a solution to the critical housing problem, but also a means for economic empowerment, climate change adaptation, vocational training and the creation of a sustainable building sector.
“A Nubian Vault, the wind can’t carry it away, the wind can’t break it, the rain can’t come in, and if there were a fire here, earth doesn’t burn... So it is really good. If you compare, the Nubian Vault method is cheaper than cement. If we could, the whole village would be Nubian Vaults.”

“On all the constructions sites I work, I train others. With the Nubian Vault, we are always teaching, we never work on a site without training masons... Being a mason has changed a lot in our family, because we work, we earn some money, it is no longer like it was before when we did nothing... It has changed our life, indeed.”

“I have lived in a rural area, and I have seen how people suffer from the housing problem, I have seen and I see that I can help them with my voice. I hope that in five years in my region, there will be only Nubian Vault construction. No other construction but the Nubian Vault, with masons trained everywhere who will not need us anymore to raise awareness. The market will be self-sustained, without AVN. And I believe we will manage this.”

“Housing issues are extremely important issues for us, for the environment and it is proven that living and housing conditions are what contributes the most to the health and well-being of populations. The Nubian Vault matches perfectly our resource management policy and our fight against poverty, because it improves the living conditions of inhabitants in rural areas.”
Created in 2000, the Nubian Vault Association addresses the triple issue of housing, economic development and climate change adaptation in West Africa, and creates the conditions for the sustainable growth of green building markets.

**AVN encourages the involvement of all stakeholders and dedicated partners, essential in reducing the housing and jobs deficits.**

AVN is a non-profit organization registered in France, with status equivalent to a 501(c)(3) U.S. charity (eligible to receive grants through the Silicon Valley Community Foundation).
