

About us

Tabletochki is an international charity fund that protects the interests of children with blood cancer in Ukraine.

The fund was established by volunteers in 2011. During four years of work we have sent seventeen children abroad for treatment, provided medicine to 1350 young patients, and achieved safe blood transfusions in Okhmatdet. We provide children with psychological and palliative care, help parents, and develop the volunteer and donor movement in Ukraine.

About the project

Charity fund Pills purchase medications and medical supplies for various hospitals throughout the country. Usually, we purchase the most up-to-date and the most effective medications, which are very expensive. These are the medications for anti-fungal and anti-tumor therapy, supportive care and immunotherapy. It is the government who should purchase many of the necessary medications, but as a rule, tenders for such purchases are either held with significant delays, or not held at all.

Project budget

One of the most important tasks of the Tabletochki Fund is to supply hospitals with those medications that are not financed by the state. Moreover, since governmental tenders for purchase of medications do not take place for months, the Tabletochki Fund covers this gap as well. Tabletochki Fund provides different kind of medications to oncological units, such as consumables, anti-infectives, antibacterial, antiemetic, antitumor, solutions, equipment.

The list of following medicines will cover up monthly needs of 40 patients from one children hospital.

Group	Name	Amount (packs)	Price (UAH)	Total (UAH)
Anti-infectives	Avelox	10	970	9700
