

We continue to help our community!

During the last semester of 2020, we continued to provide two Mobile Medical Units to Hospitals that provide medical care to Covid patients. The Mobile Medical Units continue to support the respiratory triage process to channel hospital medical care in a timely manner.

Hospital General de Cholula, San Andrés Cholula, Puebla, Mexico

You can see the videos of when we delivered the Mobile Medical Units to the Covid Hospitals in Puebla on our YouTube channel:

During this period, we have updated our medical care protocols according to the guidelines that the local authority issues based on the current epidemiological traffic light.

We are first ensuring that our work team has the necessary personal protective equipment and sufficient tools to continue providing quality and warm medical services.

When medical protocols allow us to move our medical team and volunteers to vulnerable communities and our Mobile Medical Units have fulfilled their mission within the hospitals where they are currently supporting and as soon as it is safe again, we will go back to the communities with health services. That is our passion and our motor. As the whole world is changed by this pandemic, we thank you more than ever for your generosity in this time of need.
