

Providing medical services in marginalized areas

During these last two months, the mobile medical units moved to the states of Oaxaca, Chiapas, Morelos and Puebla, where we gave medical services in about 30 municipalities and 50 localities. Several of these municipalities continue to suffer the effects of the September earthquakes, and the medical assistance they can access is nil or very expensive, hence the importance of offering them the opportunity to receive complete and free high quality medical services, including medicines.

As part of the standard of the "Un Buen Grupo de Amigos A.C." Foundation, we met 100% of the demand for services and medicines. All medical services comply with the highest standard in health services. Given the diversity of the population we attended, we treated patients in their native dialect, such as Mixe Alto, Mixe Bajo, Zapoteco and Huave.

There were 332 preventive health workshops, including a reinforcement of actions to prevent Zika. Also, wheelchairs, canes, walkers and other orthoses were delivered to the people who really needed it. With the help of the Secretary of National Defense and the Navy, we were able to spend the night in high-risk communities, allowing us to stay more days in various locations.

It was very satisfying to support babies, children, men, women and the elderly population. In this way, we support them to pursue their dreams without a health issue preventing them from achieving them. As mentioned by Mrs. Remedio Cruz Hernández, from the municipality of Tehuitzingo, Puebla "You changed my life, now I have my teeth well, I can eat. The economy is not enough and you give us health services with very qualified and kind doctors and you also give us free medicines. When you, the "Un Buen Grupo de Amigos" Foundation arrived, we told the community that you were here, because you have great confidence and faith. "

Some figures of attention to November 30 are.

No	DIAGNOSIS	Cumulative Total
1	Family Medical Consultations	2,579
2	Dental Interventions	2,328
3	Diabetes Detections	2,495
