"Gift a Smile to 81 underprivileged Cleft children in Karnataka" Project will provide free surgeries for economically challenged children born with Cleft Lip and Cleft Palate. Children between 6 months to 6 years old will receive reconstructive surgeries, treatment and psychological support to their families in order to improve their quality of life.

In a country like India where a large portion of the rural population still believes in superstitions, people consider children with cleft lip deformity to be bad luck and some even consider them cursed. The stigma attached to their deformity causes affected children, who are otherwise completely healthy, to lead incomplete fractured lives. They are often forbidden from attending school, playing with other children, being seen at social gatherings and some are even barred from leaving their homes.
