Partner with the Jaldhaara Foundation and help the cause of providing safe water to school children.

Jaldhaara Foundation (JF) in association with WaterHealth India (WHIN) has set up a network of over 500+ water purifying plants across the country. WHIN runs socially inclusive programs reaching out to economically poor and socially disadvantaged groups.

This program is a call for action for organizations to partner with us, so that we seed and prepare a healthier generation of Indians. Potential partners can adopt schools, thereby providing our nation a healthier future. Availability of clean drinking water in schools would not only ensure good health among children in their place of learning, but also bring about a behavioral change in their homes.

On an average, a child needs 2 liters of safe and purified drinking water every day.

But lakhs of children are deprived of this basic need. Your contribution could help provide a school with safe drinking water for a year.

How your donation works for the cause?

Grant or Donation of
₹ 2,00,000

=

Safe and purified water to
250 students for one year

Note - Cost per student is less than ₹ 3.5 per day

Why should you associate with the Jaldhaara Foundation?

By partnering with the Jaldhaara Foundation, you can be assured that the CSR contribution would go directly towards providing safe water in needy schools and in reducing absenteeism caused due to waterborne diseases.

Make a difference

Potential partners could join in this quest to make a difference to the lives of children.
