Project Details:

Target group :-To educate Orphan women and children who is mentally challenged group.

Due to parents negligence and due to mentally and physical retardation parents are leaving their own children in the society, for such category we are rescuing and protecting in our orphanage home. If we can train them in their own capacity of interest and attitude these children and women will get some benefit.

Some children they could not do their own self help skills for such children we will teach them in their self help skills for ex. teaching brushing skills (how to brush teeth) teaching bathing skills (How to take bath before bath how to remove their clothes how to apply soaps etc.,) these are the different skills we have to teach them in different self help skills eating, cleaning dressing, etc.,

If we can give training for some children who knows about the self help skills we have to plan for Functional academics skills like teaching money concept, colouring, teaching about society, hospital, police station, etc., concepts.

For some children we have to teach prevocational skills like preparing envelope making, candle making and agarabathis ,making., etc., skills we have to plan...

Above all these training we have to provide proper training through specialised professionals.

If we can provide Nutricious meal along with good drinking water, suitable skills we can definitely can see the better quality of life in these orphan special children.

These project can help through professional training and constant monitoring and with good supervision surely for these mentally challenged children will get more benefit in future days,.
