

	<p>1. Database Sessions: Number of times a database was accessed as a part of a session. Calculated at the product level as opposed to Interface level sessions. For example, if your institution has 20 databases in their profile, but a user only searches two of them in a visit, each of those two databases logs a Database Session Count, but the other 18 databases would not.</p>	<p>2. Total Searches: Count of searches recorded for each database searched during a search click (Regular Searches + Federated and Automated Searches).</p>	<p>3. Total Requests: Count represents all user activity related to retrieving or viewing, or linking out from a record (Sum of total full-text requests, abstract requests, total linkouts).</p>	<p>4. Total Full-Text Requests: Count of total full-text requests that apply to selected report criteria (sum of HTML, PDF, eBook Online, eBook Download, Audiobook, Flipster Online, Flipster Download, Multimedia).</p>	<p>5. Total Linkout Requests: Count of total Linkout requests that apply to selected report criteria regardless of linkout type (sum of smartlinks, customlinks, times cited).</p>	<p>6. Abstract Requests: Counted when a user views detailed record of an article, or hovers over the article preview feature of an article in a result list.</p>	<p>7. Turnaways: Number of times where access was denied to a database or publication because the licensed simultaneous user limit for the user's institution was exceeded.</p>
<b>Month</b>	<b>Database Sessions</b>	<b>Total Searches</b>	<b>Total Requests</b>	<b>Total Full-Text Requests</b>	<b>Total Linkout Requests</b>	<b>Abstract Requests</b>	<b>Turnaways</b>
