- More than 80 articles published.
- Activities, educational modules and tips: Blog, Facebook, Instagram, web page.

The best social investment is the early education of children from zero to three years old, as it impacts their quality of life and promotes equal opportunities.

The cost of not acting is high because children from 0 to 6 years who live their first experiences among adults lacking positive paternal capabilities in vulnerable environments, compromise brain development and their lifelong future.

We want that all Mexican children begin their life with solid emotional ties, without interference from toxic stress achieving healthy social and emotional development.
