
2020 Nov Report, Rendu Ocean

Before monitoring, staff will conduct monitoring training to ensure the smooth implementation of monitoring. (Photo provided by Yangjiang Haitouwan Monitoring Site)

Once the monitoring starts, the first thing is to divide the monitoring sections. This requires volunteers to collaborate together. (Photo provided by Beihai Guantouling Monitoring Site)

Then, the team pick up litter in the section. The geographical features of coasts vary from place to place. Some are beaches, some are man-made seawalls, and some are rocks. (Photos provided respectively by Dandong Monitoring Site, Zhongshan Monitoring Site, Zhangzhou Monitoring Site)

**After picking up, volunteers sorted the litter according to the ICC card.
(Photos provided respectively by Huizhou Dongtou Village Monitoring Site
and Sanya Monitoring Site)**

Weighed each category of litter. (Photo provided by Zhanjiang Lake Village Monitoring Site)

During data recording, paper card and mobile APP are executed in parallel.
(Photos provided by Zhuhai Jiuzhou Island Monitoring Site and Zhoushan Zhujiajian Monitoring Site)

Picked up a big one but how to weigh such a big fishing net? Fortunately, two resourceful and brawny men completed this challenge. (Photo provided by Danzhou Haitou Village Monitoring Site)

While monitoring, how much litter was collected? Let us call upon everyone's hard work. (Photo provided by Tangshan Monitoring Site)

Take a group photo and record this flashing moment! (Photo provided by Fuzhou Lianjiang Monitoring Site)

The last step of monitoring is to properly dispose of the collected litter and turn the uncontrolled waste back into controlled waste. (Photo provided by Pinghu Monitoring Site)

After hard work, the volunteers received their own volunteer certificates. The day to participate in monitoring is a day full of accomplishment! (Photo provided by Zhuhai Qi'ao Island Monitoring Site)
