

## CONSTRUCTION PROJECT

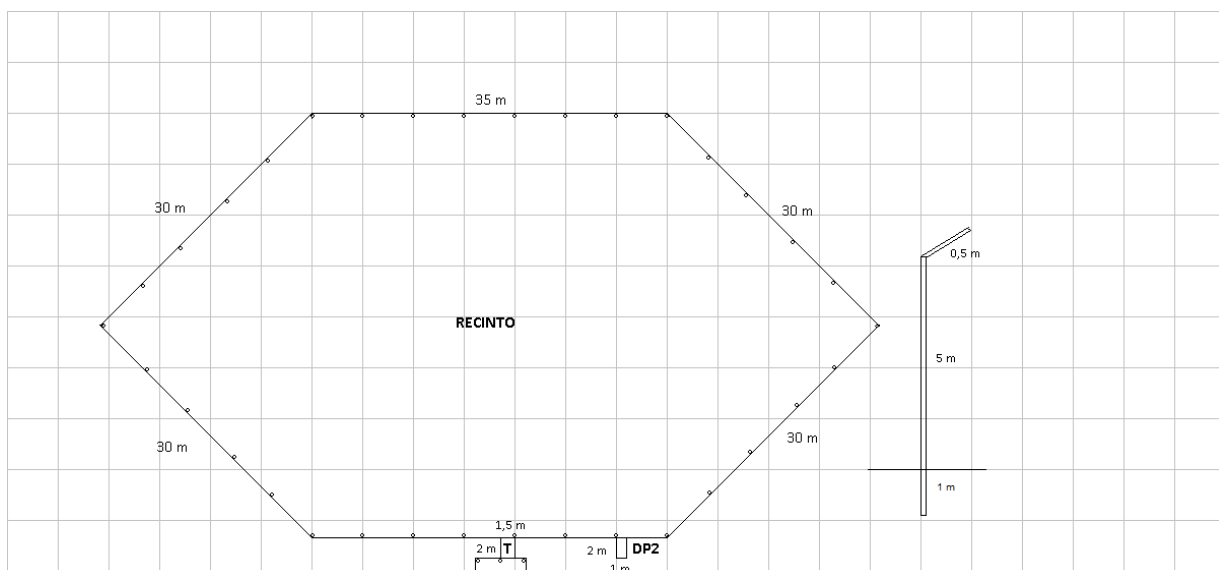

### NEW ENCLOSURE - KUSIY JAGUAR (*Panthera onca*)

The complete system consists of a large enclosure connected to a management cage by a tunnel, with two sliding doors. This allows safe handling for both the animal and the staff.

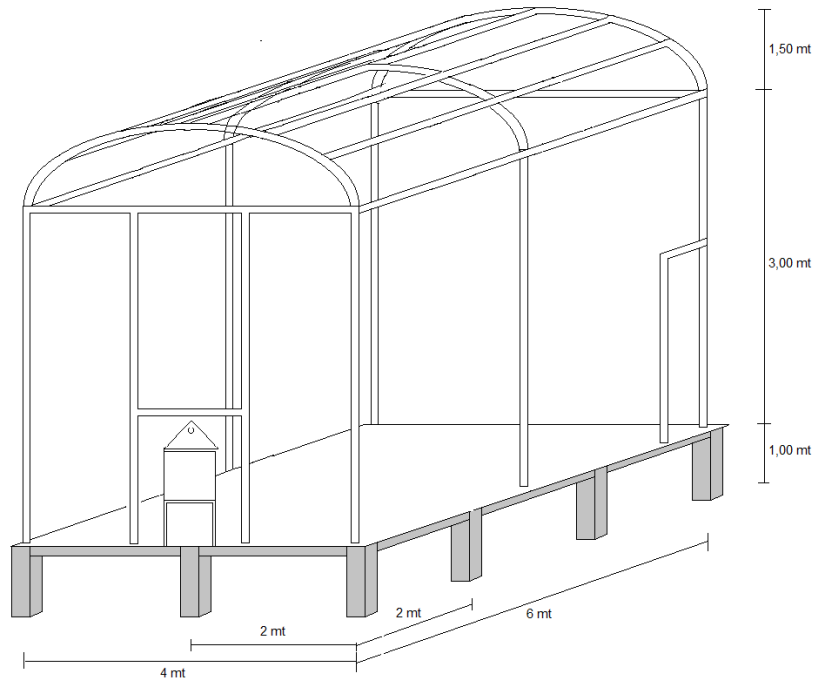

#### **LARGE ENCLOSURE:**

This will have the shape of a hexagon with an area of 1140 m<sup>2</sup>. The poles will have a height of 6 meters, and will be buried to the foundation at a depth of one meter, and an inclination of 0.50 m. To access the enclosure there will be double security doors.

## **MANAGEMENT CAGE:**

The management cage will have an area of 24 m<sup>2</sup>, a height to the top of the arch of 5.5 m, buried to the foundation a meter deep. The roof will be curved and covered.

## **TUNNEL, DOUBLE DOORS AND SLIDING DOORS:**

A tunnel will connect the structures, with a double sliding door controlled by cables, one to access the tunnel to the large enclosure and another between the tunnel and the handling cage. The large enclosure and the driving cage will have double doors for the entry of people.
