### Memo: 3d Quarterly Report CSAG Footprint Books for Kids Org #68120

A. Fundraising – Fundraising has been difficult and made more so due to the COVID19 Pandemic. Footprint entered the quarter with \$504.00 in the account. Global Giving crowdfunding has raised \$73.25, but Footprint was most pleased and honored to receive a \$1000.00 grant from GG. In total we now have in the account \$1577.25! This allows funding for more books. Books for Africa was contacted and they are still in agreement to send pallet loads of books to Ghana for Footprint. This avoids buying entire containers. A pallet holds 1100 books and the final cost per pallet, door to door, is not known. Last shipment we were able to land a pallet in Ghana for \$515, so that means if costs stay the same for each \$1.00 donated we can send 2 books! With the grant and what has been saved up, we can look at sending up to 4 pallets, or 4400 books this year (with some supplies stuffed in the boxes). Books for Africa has also been shut down due to the Pandemic, but think July-August, 2020 should be the timeframe for the next shipment.

Min Emmanuel Akida – Last Shipment

Boxes on One Pallet of Used Books – 1100 Total

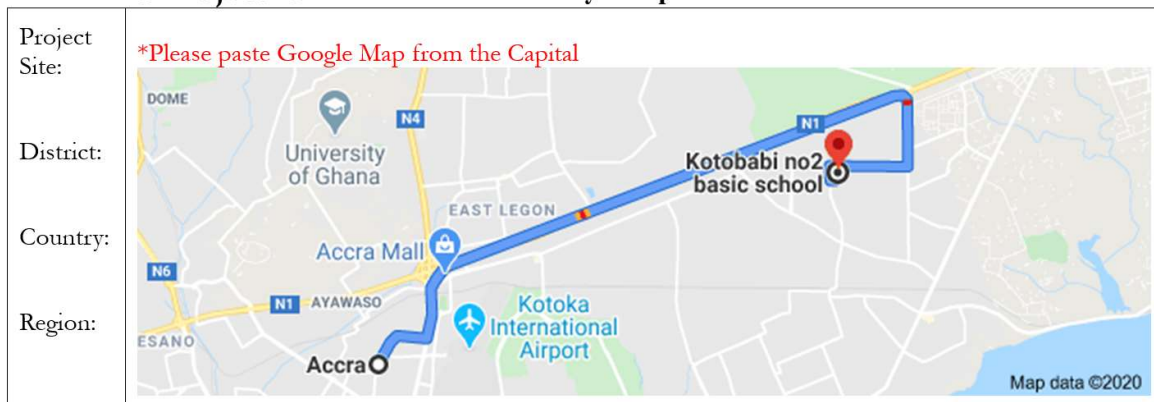

B. Library proposal Japan - Child Survival Aid Africa (CSAG) has made its application to the Ghana Embassy of Japan for funding of a village library. Footprints is please to be CSAG's technical resource. CSAG has made it past the Phase 1 selection process for the Japanese Embassy and is now in Phase 2 of the selection process. Footprint has worked with CSAG and has helped review and proof each application phase formwork package. The process is slow, but phase by phase we are advancing.

**PLAN VIEW - KOTOBABI NO. 2 CLUSTER OF SCHOOLS LIBRARY 65 X 40 FT**

C. MTU iDesign Program: CSAG Selection – CSAG was selected by Michigan Technological University for its iDesign program for the year 2020. The program is an excellent opportunity for the organization and will provide finished design drawings with a bill of materials and description for a complete fresh water sourcing, conveyance, storage, treatment and distribution network. The local Library does not have a source of potable water at this time and the currently draws raw, untreated water from a nearby river, which is moved on foot to the village. The Library and community will

benefit greatly from fresh, potable drinking water. Once a design is in hand, a campaign will be needed to raise funds for this important work.

## **200511 RPT FPP MTU Ghana Water Project -Problem Statement**

### **Summary**

Improve health and reduce poverty levels in sixteen communities by constructing 20 hand-dug wells fitted with pumps, and to build four KVIP toilets in schools to improve sanitation and reduce disease in Adjei Kojo in Tema West Municipality

The main problem of the project communities is poor health of the people. In the absence of potable water supply and sanitation facilities in the identified communities, the rate of death associated with the ten most common diseases, which are preventable has increased steadily in the last 5 years.
