

A TIMELY DIAGNOSIS

PATIENT'S NAME

Gladys

Gladys is a patient who came to our Hospital due to severe abdominal pain that limited her quality of life significantly. When she was evaluated by our medical staff, she was diagnosed with colon cancer. Through the laparoscopy procedure, it was possible to provide her with timely treatment for this pathology, removing the tumor based on the expertise of our team's gastrointestinal and endoscopic specialist surgeon.

After the intervention, and thanks to the efficiency of the procedure, it was possible to discharge her the following day since laparoscopy procedures **reduce the necessary stay time at the hospital.**

The patient highlights the **good treatment and quality of the service** she received at our Hospital from both the specialist who treated her and the assistant personnel who assisted her during the procedures and her subsequent recovery process.

Hospital Pablo Tobón Uribe maintains its purpose of ensuring timely diagnoses for every patient in order to provide them with agile and effective treatment.
