## Acid Attack by Causes

# We are seeking an impact

Impactful stories always inspire us. We always try to find ways to make more impact with our work. We believe that the country and the world will change if we move forward with the underprivileged. All that is needed is a change of mindset and your help.

In September 2022, Monira faced complications giving birth to her second child. Ever since she suffered from various health issues related to her liver, kidney, bladder, and postpartum complications requiring advanced treatment. In that time, ASF came forward to support Monira financially and mentally. To help cover the expense of Monira's treatments more help is needed.

On January 2023 ASF came forward and arranged a reconstructive surgery for Jesmin at Shaheed Suhrawardy Medical College and Hospital (ShSMC). Her surgery is complete and is now recovering. Her well-wisher ASF will always be by her side.

On November 2014 Sumi was attacked with acid blinding both her eyes and damaging her face and hands. "I am thankful to ASF because my relatives did not think of me as much as ASF had", said Sumi. ASF hopes that Sumi becomes self-reliant and lives with her head held up high in society.

Shima was attacked with acid when she was only 7 months old. As a post-service and scheduled follow-up process, ASF visited Shima in her hometown Sylhet on 21st February 2023. She is preparing for her Higher Secondary Exam. She is studying science to become a Doctor. Shima said she was doing fine when ASF inquired about her physical and mental health. ASF is striving every day to create an acid-free, survivor-friendly Bangladesh where every survivor is able to say they are fine with full confidence.

**We have more beneficiaries who need your assistance.**
