Project Title:

Hand press-Soil block Making Machine

Project summary:

This project buys a block maker machine which Omilling Boma - Sudan will be using in making soil blocks locally.

Project Need and Beneficiaries:

We need a hand press-soil block machine which presses interlocking blocks from a mixture of soil, sand, and cement. These blocks can be stacked onto each other and no mortar is needed, which will keep costs down. A concrete ring beam is constructed which holds the blocks together. We will use this for our schools, and healthcare centers building projects.

Project activities:

Producing interlocking soil blocks, and distributes blocks to different building projects taking place within the community.

Donation values:

\$10 – adds up to transporting costs

\$25 – adds up to custom and documentation fees

\$3000- buys hand-press soil block machine

Project budget:

\$3000- onetime costs.

Long long-Term impact:

People healthy will improve in Omilling community as they will not be making blocks using their hands. Soil- blocks need not to be burnt because water is use in curing them, and this contributes to environmental improvement.

Quote:

Give a block-maker-machine but do not give ready - made blocks. When we can make our blocks-then we can build ourselves like you.

-- Linda Acen Abili, project director
