

**Targeted group:** Youth Vision Society (YVS) and Women Programs Center (WPC) Rafah will have 4 families each and those families have enough space to implement civilized agriculture at home and need to improve their economic situation in light of the Corona pandemic

**Approach:** Reaching families whose economic situation is so difficult and need support to provide an income source to improve their lives.

Suitable seedlings for home farming will be distributed during this very difficult situation of the Coronavirus, as they do not need large cultivated areas and are proportional to the temperature, humidity, and soil of the area

This initiative comes to embody the meanings of self-reliance, and contribute to improve the economic situation for a number of families and increase the green area in the region

A number of seedlings and seeds will be distributed for internal and external cultivation; with the aim of encouraging the city to be green, and provide the opportunity for homemakers to plant vegetables and fruits in their houses to dispense with buying food from markets

YVS and WPC will choose 8 families total divided into 4 for each organization, those families will be able to get plants and some animals to take care of.
