Protecting our Bayous, Rivers, and Streams all the way to Galveston Bay

*Working to ensure every  
waterway is fishable,  
swimmable, and drinkable for all*

[www.bayoucitywaterkeeper.org](http://www.bayoucitywaterkeeper.org)

Bayou City Waterkeeper seeks to protect and restore the integrity of our bayous, rivers, streams, and the bays throughout the Lower Galveston Bay watershed through advocacy, education, and action.

We strive to be an effective and sustainable organization focused on making the Galveston Bay watershed a productive and healthy ecosystem that serves our communities' natural, economic, and recreational needs for generations to come. We utilize law and science in our commitment to a clean and healthy watershed.

We are one of over 250 members of the international Waterkeeper Alliance – dedicated to healthy waters for all.

# Our Approach

## Clean Water

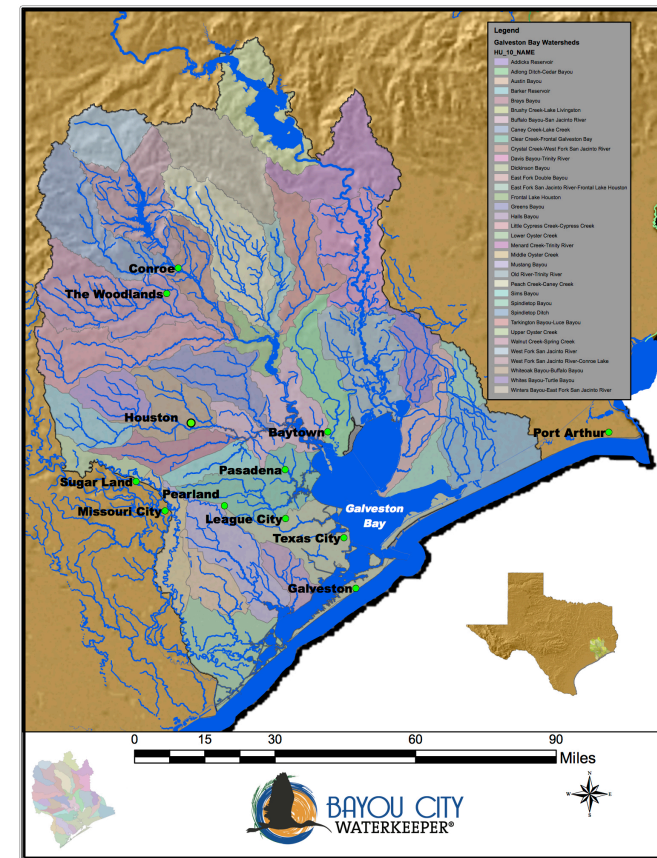

Bayou City Waterkeeper works to achieve drinkable, swimmable and fishable water by holding polluters accountable. With your help, we strive to make sure that Texas and our local governments are following the law to protect the people and wildlife that depend on these waters.

## Protecting Wetlands

We aim to preserve and protect our wetlands through our Wetland Watch Program. We share our policy expertise with people and communities who want to stop these damaging projects and help locals fight wetland destruction in their communities – working to protect the benefits our wetlands provide.

## Resilient Communities

Both natural and man-made land features are necessary to protect our diverse neighborhoods. We advocate for safety and resiliency of our urban and coastal communities. By investing in systems that strengthen our natural defenses from flooding and storm surge, we can protect our homes and communities, as well as promoting a productive economy throughout our region.

As shown above, the Lower Galveston Bay watershed includes Galveston Bay and all its tributaries. Our work protects and defends our wetlands, floodplains, riparian habitats, and the surrounding bays. By holding polluters accountable, our goal is to make our waterways fishable, swimmable, and drinkable for all.
