

NATURE VILLAGE

INNOVATION AND CLEAN TECHNOLOGIES
FOR SUSTAINABLE RURAL DEVELOPMENT

The Nature Village project located in Sabana Yegua Viejo, Azua, includes the co-creation of the first sustainable community in the Caribbean region that will operate entirely with solar energy and will give people in situations of poverty and vulnerability the opportunity to close their development gaps jointly bringing access to clean energy, water and sanitation, housing improvement, education, technology and sustainable entrepreneurship with the implementation of a fish farm system led by women and young people, a telemetering system with information available in an open data platform and eco-friendly housing construction. This project benefits 50 families.

Thank you!

María and all Sabana Yegua Viejo's people are very happy with the progress of their community. On behalf of our team, THANK YOU for your solidarity and support through the Global Giving fundraising platform.

We have already raised funds to start building 34 homes to benefit more than 170 people. Thanks to your generosity María and her neighbors are having access for the first time to clean water and energy, a bathroom and better living conditions. These eco-innovative homes are built with recycled plastic through the partnership with Habitat's local affiliate in the Dominican Republic.

Thanks to 72 donors we reached **US\$6,002** to raise up the house. We are still active in Global Giving's portal receiving funds to complete the total goal for the house that is around US\$ 8,500. It contemplates 3 bedrooms for her family.

You have already made a great contribution, now we encourage you to tell your friends and contacts in your network and motivate them to be part of this campaign and that together we could complete this unique project.

Thank You for making it possible!
