

Koidu Government Hospital, Sierra Leone

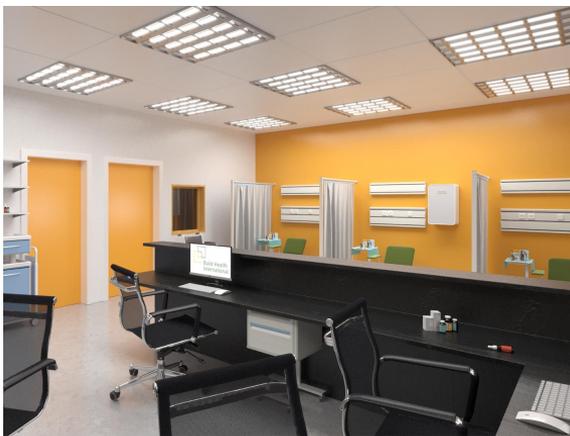

Maternal Center of Excellence

Build Health
International

Project Introduction - What is the MCoE?

Build Health International has been supporting strategic growth at Koidu Government Hospital in Sierra Leone since the 2014-2016 Ebola epidemic. Now, we are working with Partners In Health to undertake design, engineering, construction management and procurement for a new 10-building Maternal Center of Excellence at the hospital.

Project Introduction - What is the MCoE?

The iconic 143 bed facility will feature a maternity ward, outpatient department, NICU, and surgical suites, as well as waiting rooms, courtyards, and dormitories to host accompanying family members. Our hope is that this design will serve as a blueprint for future maternal-focused healthcare infrastructure across Sierra Leone and Africa.

Surgical Suite

Courtyard

Neonatal Intensive Care Unit

Expected Impact

Combat Maternal Mortality

- Women in Sierra Leone face a 1 in 20 lifetime risk of dying in pregnancy or childbirth.
- The MCoE will provide the medical interventions needed to prevent these deaths

Rebuild Community Trust

- The Ebola crisis fueled skepticism of the country's health system
- The MCoE will prioritize compassion, openness, and dignity to deliver the highest quality care and, in turn, rebuild trust

Expected Impact

Expand Koidu Government Hospital

- Currently, Koidu Government Hospital serves over 500,000 people, and is the only hospital in the Kono district
- The MCoE will serve as a massive expansion and reduce strain on the healthcare system

Train Future Clinical Staff

- BHI's goal is to create sustainable improvements to maternal healthcare
- The MCoE will serve as a premier training facility, preparing the next generation of clinical staff

How You Can Help?

Here's what BHI needs to complete the MCoE

Equipment

- Baby Baths
- Catheter Stands
- Stretchers
- Syringe Pumps

IT

- Projector Screens
- Televisions

Medical Furniture

- Crash Carts
- Medication Carts
- Kick Buckets
- IV Hooks
- Physician Stools
- Refrigerators
- Blood Drawing Chairs
