

HELP REBUILD PUERTO RICO THROUGH GLASS RECYCLING

Support our work and help us reconstruct Puerto Rico and close the cycle for glass. Generating Employment and Positive Environmental Impact.

THE CIRCULAR ECONOMY

Systems of production and consumption that take out waste of the equation and instead, materials and resources have longer life cycles allowing nature to be restored.

1/5 OF CO2 EMISSIONS

Globally can be cut off by transitioning to a circular economy. That is 10 Billion Tons of CO2 by 2050.

Landfills and Natural Disasters

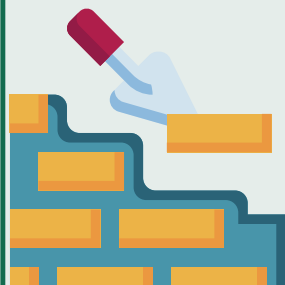

18 of the 29 Landfills recognized in PR must be closed due to lack of environmental compliance.

Hurricane Maria and 2020 earthquakes had shortened landfills life span and damaged infrastructure in general.

A huge impact can be made if waste streams end up being recycled.

FROM WASTE TO CONSTRUCTION MATERIALS

Our project will support the reconstruction of PR by supporting the value chain of glass closing its cycle and creating sustainable construction materials by connecting communities, public and private sector to transform recycled glass from 5 municipalities into construction blocks.

HOW WE WILL DO IT!

We will work along with stakeholders in 7 identified pillars.

Governance.

Education.

Infrastructure.

Logistics.

Environmental Performance.

Communications.

Monitoring and Evaluation.
