

## To support a country child and Green Eco School dream come true

50,000 rural children, 100 rural Green Eco Schools need your support!

Green Eco School includes:

- Poor student grants
- Book reading
- Energy saving and environmental protection facilities
- Environmental activities
- Local culture into the classroom
- Teacher training

### Every child can meet basic needs

I bought a colored pencil with a bursary. Previously, only pencils could be used for painting.

Draw beautiful spring,  
Draw a poster calling for environmental protection.

There is a library corner in the classroom.  
Living in a remote mountain village also has a wealth of knowledge.

## The land, forests and water in the hometown are polluted and destroyed to varying degrees

### Shocking environmental issues:

The polluted river water can't be drunk, the fish and shrimp are gone, a lot of chemical fertilizers and pesticides, the land board can not be planted, and a lot of soil erosion is caused by slashing trees.

## Energy-saving and environmentally campus

The campus introduces energy-saving and environmental protection facilities, solar street lights and solar water heaters. It brings convenience to teachers and students in school life and saves energy.

Establish a campus biogas tank, where biogas can be used for cooking and heating. The biogas slurry can be fertilized for vegetable fields.

## Participate in Environmental Actions

School loess dust, no green.  
Teachers and students plant trees together.

Open the vegetable fields in the school, loosen the soil, fertilize, grow vegetables, take care of them to grow, do not fight pesticides, and eat fresh and delicious healthy vegetables every meal.

## Local Culture Go into the Classroom

When local culture enters the classroom, grandparents no longer have to worry about the loss of national skills in their hands.  
Learning poetry, dance, crafts, and the concept of diligence and thrift, respecting the elders, the classroom has become more abundant.

## Increase teacher training opportunities

Teachers who participate in the training can guide students to jointly build a green ecological civilization school. Topics include: student-centered teaching, environmental education, local cultural heritage, school family villages, and gender education.

Adolescent children urgently need to know the knowledge of physical health. After the teacher participates in the training, they become teachers of girls' health education. Their first lesson is "Where am I from?"

### Green Eco School

Children as vanguard of environment protection, seeds of culture preservation, Participate in local sustainable development activities

- \$100 Support a rural student for one semester of environmental protection and local culture
- \$100 Support one year of stipend for a special student
- \$200 Support a rural teacher to participate in a teacher training
- \$400 Support a class library corner and one year of reading activities
