

With your support, we were able to do the renovation of the Passerelles Numériques center in Cambodia: repainting the walls and improving the layout of the classrooms to make them more creative, agile and innovative and thus ensure better training and a sustainable exit from poverty for disadvantaged young people in Cambodia.

- Classrooms promoting innovation, stimulation and collaboration (easily adjustable individual tables facilitate group teaching, by project. We make the classroom more flexible depending on the type of activity. By installing glass boards on an entire wall, we allow several groups of students to present a solution or discuss a problem.

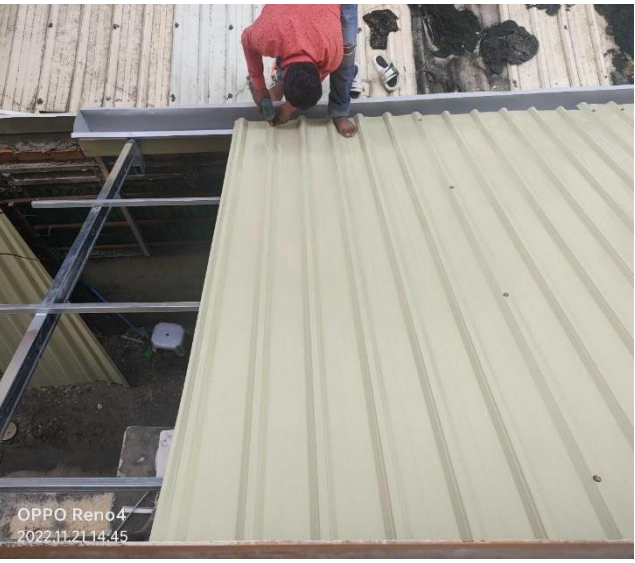

A library offering students the opportunity to read in Khmer or English, but also to organize exchanges and cultural activities. We were able to purchase

numerous books.

Renovation of the canteen: the roof of the canteen has been redone to provide better work space for staff.

We were also able to purchase supplies: doors, fans, lamps to provide a better workspace for our students, teachers, volunteers and partners

Thank you! This project allows us to continue our mission!
