Bujumbura

The problems we have encountered is the lack of money to manufacture an artisanal distiller machine which will be useful for the transformation of petroleum into plastics.

Since the invasion of this Project we claim that this year 2023 we will have enough money for the implementation of this useful Project which will be used in our country and throughout the whole world. A three-month oil-to-plastics project we received a total of \$100. A forecast of 520,000 dollars for the start of the Project is based on studies carried out by the non-profit association Save Life make Difference.

In Burundi we have a very fragile land, the gap caused by a rain a very large part flows towards the rivers and causes the destruction of homes, the loss of cultivable land and flooding of people located around rivers or lakes.

Over time we will have money the start of this Project will be in our priorities
