Sub: Project report our step in environment

1. We Plant environment includes those biotic and abiotic factors that influence growth and development of forages.
2. Cumulative effects are integrated through physiological process and reflected in forage growth rate, developmental rate, yield, and herbage quality.
3. Since the launch of the project 8 months ago save life make difference. Now we need support to continue our project .
4. Because after to plant trees we need to take care of the waste plastics, make the city clean,

- Now we have 12 employers , we need in this years to grown our organization to work in all the country
- This year we complete to plan very well how to start and protect our environment against waste plastic across the country.
- We need to buy a small truck that we can use to collect waste plastic in the country ,
One unity \$ 40 000
- We Need a machine for treatment of plastic to petrol
One unity \$ 25000

- We need buy a space of storage and transformation hall
Cost \$30000
We will make public Dedusting cost \$ 5000
Now we are waiting to start the big industries for produce petrole in waste
pastique and pavers

The project will help to give job for many staff and to produce petrol for cooking stove

Number of salary can be 20 people

Exemple of the machine

This is what we made in past 4 months and we continue to work hard for our community

We continue to ask our supporter to take care this project because is helpful for the future
