Shefa Alorman report

Projects ,Surgeries &
General Information

Our Vision

To be a pioneer in the field of oncology care in Egypt and the region; Through its distinction in the fields of treatment, education, training and research For cancer treatment and disease prevention education, With this project, it will become the largest international medical city in Egypt for the treatment of cancer.

Our Mission

Providing the best treatment service for cancer patients in Upper Egypt free of charge, and providing the highest level of specialized and integrated health care free of charge for oncology patients, both children and adults, in the governorates of Upper Egypt, in addition to providing an integrated educational, training and research environment, public awareness programs and early detection in order to reduce the death rate and alleviate suffering Cancer patients and their families.

Services Provided by Shefa

Department of Nuclear Medicine :

The Nuclear Medicine Unit (Diagnostic and Therapeutic) within Shefaa Al-Orman Hospital is considered one of the most important nuclear medicine units in Upper Egypt. Which has the superior ability to perform atomic scanning tests with high accuracy and speed of completion, in addition to the radiation dose measuring device, and the complete radiation detector device.

Diagnostic Radiology Department :

The aim of this section is to diagnose using radiology through a number of advanced devices, namely:

X-ray machine: from Siemens, used to assess the condition of bones, joints and chest.

* Mammography device: from Siemens, and it is considered one of the latest devices that can evaluate the condition of the breast and diagnose benign and malignant tumours.

* Ultrasound device: from Siemens, and it is one of the most accurate and modern devices. It can examine different parts of the body, examine blood vessels, and assess their condition. It is used as a guide for sampling from various parts of the body, with assemblies in the pleura and peritoneum, and drainage of pus foci. .

* Multi-segment CT scan: from Siemens, thanks to this device and its modern capabilities, various tumours throughout the body are diagnosed, their condition evaluated, the presence of secondary tumours or not, the pathological condition evaluated, the patient's response to chemotherapy, and patients evaluated before and after operations Surgical, and is used to guide sampling, drainage of fluids and pus foci.

Outpatient clinics :

Outpatient clinics are specialized clinics in which specialized doctors provide medical examination services in areas including: general cancer detection, blood diseases, oncological surgery, chemotherapy, radiation, and nuclear medicine. Gastrointestinal tumours, and lung tumour clinics.

internal section

The internal department consists of an inpatient unit with 115 beds for cancer patients, in addition to an intensive care unit with 20 beds; Including dialysis equipment, Operations and Recovery Department, Exploratory Endoscopy Department, Surgical Pathology Department, Blood Bank Department, Systems and Information Centre, Medical Waste Disposal Unit, Positron X-ray machine, and a fluoroscopy tomography machine.
