

## Tele-Medical

In a world that sometimes feels vast and disconnected, the Tele-medical project brought expert consultations to families' doorsteps. Your support facilitated online consultations for children with movement disabilities, breaking geographical barriers and ensuring timely and expert advice for parents navigating uncharted territories.

## Breaking Barriers

As we reflect on the past 4 months, with target of 2 families a month. However, the recent performance has far surpassed this initial goal, with an astounding 10 families attended within 4 months.

This remarkable achievement not only highlights the project's capacity to meet demand but also emphasizes the pressing need for accessible and specialized healthcare services.

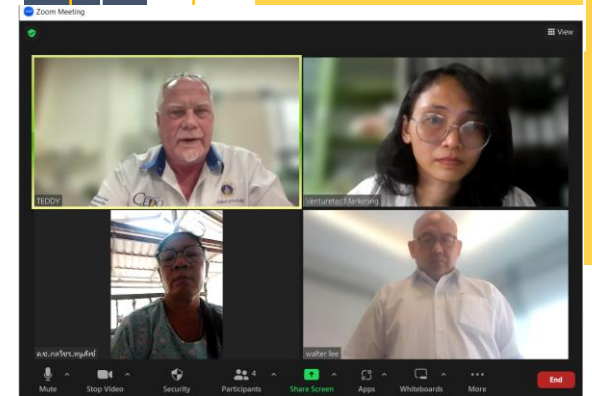

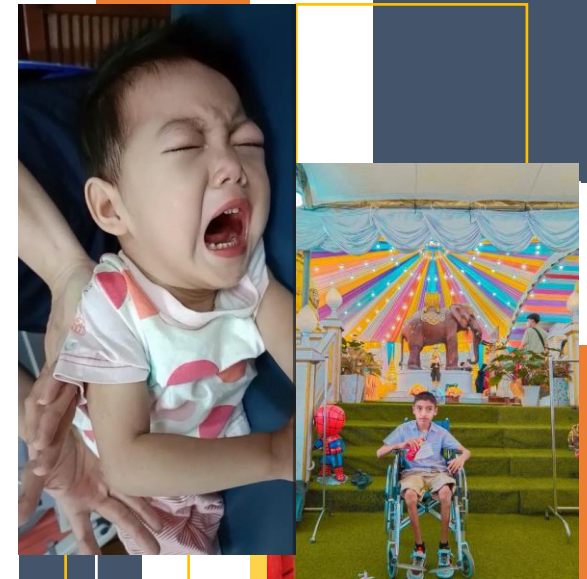

Throughout the project, there has been continuous monitoring of treatment outcomes every 2 months. This is to ensure that the children in the program have shown developmental progress and have received suitable equipment, enabling them to live independent, aligning with the project's objectives.

## Our Achievement.

The success we've achieved so far is just the beginning, and with your ongoing support we can reach even greater heights in improving the lives of these children and their families. Together. Let's make sure that no child is left without the care and guidance they deserve.

Currently, there are numerous families patiently waiting for our expert consultations. Each day without access to this service is a missed opportunity to positively influence the lives of children with movement disabilities.

Together, we're not changing lives, we're shaping a brighter, more inclusive future.
