Empowering. Sustaining. Improving.

WHO ARE WE?

Clean Water for Haiti is a volunteer-run organization, working to improve the lives of Haitians by supplying Biosand water filters to individual homes.

The problems we address are severe. At present, one in eight children under the age of five die of water-borne disease and illness. Less than 45% of the roughly 9 million population have access to potable water. Clean Water for Haiti provides the simple, effective Biosand water filters that help to improve health and extend the lives of thousands every year.

YOU CAN MAKE A HUGE DIFFERENCE.

Many Haitian families currently have no access to clean water. Often, households draw their water from bacteria and parasite-ridden rivers and streams.

Biosand filters can effectively remove 98-100% of all disease causing microbes (worms, protozoa, bacteria and viruses). Water from contaminated sources is poured through the filter and is immediately ready to use.

The average Haitian household is 8-10 people. A Biosand filter can treat enough water each day for all of the household needs - drinking, bathing, cooking and cleaning. And it's so simple that even the youngest members of the family can use it.

The filters are simple to build, are easy to use, require very little maintenance, do not need electricity to operate, and can last for 20 years or more.

Our goal is to provide Biosand water filters to as many Haitian families in as many communities as possible. With your donation of \$50 US or more we will help men, women and children throughout Haiti live healthier lives.

CLEAN WATER FOR HAITI PRIMARY GOALS.

Your generous gift will help us:

- Promote and install Biosand water filters in communities throughout Haiti.
- Establish new production sites to reach different regions of Haiti.
- Teach necessary sanitation and hygiene education to filter recipients and their communities.
- Create employment opportunities for Haitian men and women.
- Support the Haitian economy by purchasing materials locally.
- Train, resource and support other organizations interested in starting Biosand water filter projects.

Past and future: Since 2001, when Clean Water for Haiti was founded, we have installed over 12,000 Biosand water filters. With your generous donation, we can continue to produce and install approximately 200 Biosand water filters per month, giving people access to clean water and a chance for a better future.

The World Health Organization has declared Haiti the world's most water-impooverished country. As many as 50% of the people in Haiti have no access to clean water and over 70% have no sanitary sewers.
