

2025 IMPACT REPORT

HIGHLIGHT

Impact Snapshot 2025

In 2025, **Happy Hearts Indonesia** took another step forward—reaching **47 schools** and creating safer, more inclusive learning spaces for over **5,000 children** and **28,000 community members** across Indonesia.

Funds raised totaling **IDR 34.367.581.819** supported school construction, including **35 schools built with recycled plastic blocks**, turning **127.3 tons of plastic waste** into safe learning spaces. We also established **2 libraries** and provided **clean water access to 4 schools**.

Beyond infrastructure, we strengthened school sustainability through **waste management training in 22 schools** and **school management training in 37 schools**.

Thank you, your support continues to create lasting change in communities across Indonesia.

DEEPER

Impact Area

Each pin represents a community where children are learning, growing, and dreaming in safer spaces.

PROGRAM

Block School

In 2025, recycled plastic blocks were used to build **35 schools (74% of total school)**, exceeding our annual target and supporting sustainable, long-term learning. Community involvement during construction also raised awareness of plastic waste management and strengthened shared ownership.

Our 2025 Commitment to Carbon Footprint Reduction

102 Block Classrooms Rebuilt

51 Toilets Rebuilt

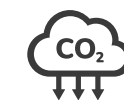

1 Libraries Rebuilt

62,582 Total Number of Plastic Blocks

127,3 tons Plastic Recycled

298,3 tons Carbon Reduced

PROGRAM

Library

Expanding access to reading materials remained a key priority in 2025, with **2 new libraries** established and **over 500 books** distributed to support students' literacy development. These libraries provided children with greater access to age-appropriate and engaging reading materials.

One of our beneficiary schools, **SMP Triguna Bhakti** in Surabaya, Jawa Timur, illustrates how a library can become a catalyst for change. Since the library was built, the school has seen a steady increase in student visits and book borrowing. To nurture this growing interest, the school runs a monthly literacy program in collaboration with the Surabaya City Public Library (Perpusda).

Furthermore, to ensure sustainability, the school has appointed a dedicated librarian who manages daily operations and enables students to borrow books to read at home. This experience stands as a testament to how school libraries can nurture literacy and create lasting impact within a school community.

PROGRAM

Water Access

Happy Hearts Indonesia believes that access to clean water is fundamental to quality education and community well-being. In East Nusa Tenggara (NTT), **50–60%** of the schools we have rebuilt still face limited access to reliable water. To address this challenge, through our Water Access Initiative, we provide sustainable water solutions to schools in underserved areas, where water scarcity continues to disrupt daily life and learning.

Last year, we installed borewells at five schools, significantly improving their access to clean water. These borewells now provide a dependable and continuous water supply, allowing schools to maintain functional toilets and handwashing facilities, improve sanitation practices, and create healthier learning environments. Beyond the school grounds, nearby communities also benefit from easier access to water, reducing their reliance on purchased water and strengthening local resilience.

4 Water Access

PROGRAM

School Management Training

Our **School Management Training** reached **37 schools**, reaching **74 participants**, including school principals and treasurers. Building on previous years, we introduced post-training mentoring to ensure schools could apply what they learned in practice. This ongoing support helps schools to develop effective school development plans, enhancing financial management and accountability, and strengthening stakeholder communication strategies to improve collaboration.

Waste Management Training

In 2025, we delivered **Waste Management Training** to **22 schools**, following the completion of the trial phase in the previous year. The training introduced waste management practices that can be applied in daily school activities.

Teachers and students learned about waste segregation, composting, and simple gardening through fun, age-appropriate learning methods, and hands-on practice. This approach supports schools in creating cleaner learning environments while helping students build positive habits from an early age.

OUR AIM

What's Next for Us

In 2026, we will continue strengthening schools by supporting ongoing development, providing essential resources, and ensuring every child has access to a quality, sustainable learning environment.

We aim to build:

50
Schools

80%
Block Schools

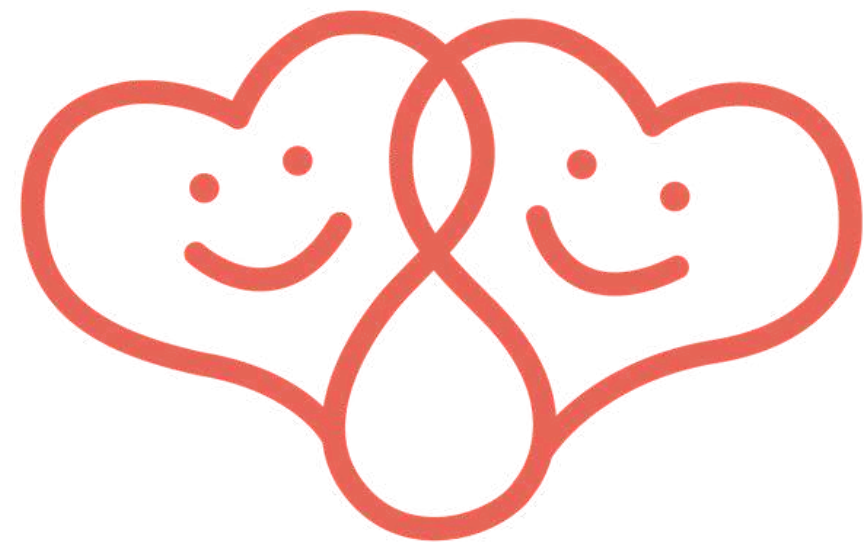

50%
in Sumatera

Our program's impact continues to grow by providing schools with proper classrooms, sanitation and clean water, libraries, and soft skills training.

We invite you to join us in empowering children and communities, shaping a brighter future together, and creating lasting opportunities for learning and growth.
