

ALNAS GUIDE 2024

[DONATE NOW](#)

WHO ARE WE?

AlNas Hospital is one of Al-Joud Charity Foundation's not-for-profit organizations registered under # 715 for the year 2015 in the central administration for associations and unions at the Ministry of Social Solidarity.

AlNas Charity Hospital was established with the vision of a multi-disciplinary medical city that provides high quality medical services.

AlNas Charity Hospital is located in Shubra Al-Khaimah-North of Cairo, and thus is considered the link between Delta region and northern Upper Egypt.

OUR GOALS

MISSION :

Raising the level of medical services provided to Egyptian citizens to the best medical practices, education, and scientific research.

VISION :

For the hospital to become a pioneer in healthcare in the community, based on a commitment to excellence and responsiveness to tailored patients' needs through high-quality services at no cost.

OBJECTIVES :

Quality: Providing excellence in healthcare through focusing on patient care

People: To become the hospital of choice for healthcare staff.

ACCREDITATION BY THE GENERAL AUTHORITY FOR HEALTH ACCREDITATION AND CONTROL (GAHAR)

- Al Nas Hospital is committed to providing its treatment and diagnostic services according to the highest standards. Therefore, real steps have been taken towards accreditation by GAHAR.
- GAHAR is the body entrusted with issuing the standards and the one which assess compliance to them to ensure the provision of High quality standards in health services in all different health facilities.
- GAHAR Accreditation Standards are developed by experts in the field of quality of healthcare, GAHAR Accreditation Standards are accredited by the international accreditation body, ISQua.
- Al Nas Hospital is proud to be accredited by GAHAR with the highest decision level (3 years certificate). this reflects the hospital commitment to quality and patient safety at all levels as well as implementation of all national safety requirements issued by GAHAR.

ACHIEVEMENTS IN 4 YEARS

ALL PATIENTS ARE INDIGENT FROM ALL OVER EGYPT

- Gastrointestinal Surgeries
- Gastrointestinal Endoscopy

THE DEPARTMENT OF CARDIAC AND THORACIC OPERATIONS

This department contains 2 fully equipped operation rooms in which several surgeries are performed such as Adult congenital surgery, complex congenital heart surgeries, neonatal heart surgeries, valvar and coronary surgeries, minimal invasive surgeries and aortic root surgeries.

SURGICAL INTENSIVE CARE UNIT

The hospital has 2 intensive care units, with a total of 35 beds. There, a multidisciplinary team of specialized doctors and highly trained nurses receive and care for patients after various cardiovascular procedures. The unit is equipped with state-of-the-art equipment for monitoring, medication delivery, respiratory and cardiovascular care. The ICUs are single rooms each room is supervised by a single nurse, monitored by a central station; for better medical care, better infection control, patient privacy and family support.

CARDIAC CARE UNIT

It consists of 15 beds, provides high-quality care to patients with conditions such as acute coronary syndrome, myocardial insufficiency, congenital heart disease and observation of patients after cardiac catheterization.

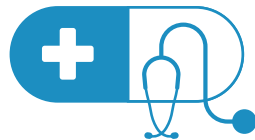

CARDIAC CATHETERIZATION (CATHLAB)

- Our Vision at AL Nas Hospital is to deliver comprehensive care through adult & pediatric cardiac interventions of the highest quality.
- The hybrid room is one of a kind - it serves as both a cathlab room and an operating room, allowing for the performance of various complex procedures that require collaboration between cardiologists and cardiac surgeons through minimally invasive approaches.
- Our cathlab team is constantly applying the most up-to-date non-surgical methods of treating rare life-threatening cardiac conditions, which require highly polished technical skills such as:
 - Neonatal cardiac interventions, coronary angioplasty, pulmonary atresia perforation / stenting, stent repair for main pulmonary artery stenosis, and replacement of pulmonary and aortic valves.
 - In addition, we specialize in the treatment of adolescents/young adults with congenital heart diseases and patients with abnormal electric activities in their hearts.

DEPARTMENT OF ANESTHESIA AND INTENSIVE CARE

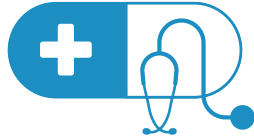

Anaesthesia is the medical specialty concerned with the total perioperative care of patients before, during and after surgery.

The Department of Anesthesia .provides high-quality patient care, conducts innovative research and offers comprehensive educational opportunities.

LABORATORY DEPARTMENT AND BLOOD BANK

- 3 International Grants and Government Funding
- 4 Collaboration with Research Institutions
- 5 Health Insurance and Government Programs
- 6 Cost Optimization and Efficiency Measures
- 7 VIP Services and Amenities
- 8 Medical Education and Training Programs

ALNAS HOSPITAL CAPACITY

FULL CAPACITY VS OPERATIONAL CAPACITY

SUCCESS STORIES

“These stories were written with your support.”

ADAM:

Adam is a child, who at the age of only 5 days, was diagnosed with Transposition of great arteries, VSD,PDA.

As a critically sick new born, his parents had tried to get treatment in multiple places in vain.

A doctor recommended that he should go to Alnas Hospital. After his arrival, he was immediately accepted due to the severity of his condition.

He experienced complications that postponed the surgery, and during this period, the medical team at the hospital discovered gastrointestinal issues and treated them.

Once his health stabilized and he was deemed fit for the operation, a 7-hour surgery was performed. Shortly after, he was discharged from the hospital and had to undergo regular check-ups every 6 months.

Now Adam is 4 years old , a healthy little boy with much of high hopes ahead of him!

SUCCESS STORIES

“These stories were written with your support.”

ASIL:

The one year old girl, Asil, is one of the most difficult cases that were treated at Al-Nas Hospital.

Asil has been suffering since her birth in February 2020 from a complex congenital heart defect involving the transitional atrioventricular canal with severe pulmonary valve stenosis. Her first surgery was performed outside of Al-Nas Hospital, but her health condition did not improve.

In March 2021, her family applied to Al-Nas Hospital, and she was immediately admitted due to her critical condition.

She had first undergone open-heart surgery as a total repair to dilate the pulmonary valve, repair the mitral valve, and tricuspid valve, and then she had another open-heart surgery to replace the mitral valve.

Asil stayed in the intensive care unit for 6 months, and thanks to God and the excellent medical team, she was given a new lease on life, and her life has completely transformed.

Now almost 4 years of age, She no longer suffers from weight loss or muscle weakness and is now living her childhood normally.
