

Together for Inclusion: Helping Children with Disa

Our foundation raises funds to ensure that children with disabilities have access to the necessary social rehabilitation services. We provide children with therapeutic classes and care programs offered by specialized centers, including sensory development and psychological support. These therapies help improve children's motor skills, communication abilities and emotional stability.

The range of services includes:

-  Play therapy – development through play;
-  Sand therapy – to relieve stress and develop fine motor skills;
-  Sensory activities – stimulation of sensory perception;
-  Art therapy – expressing emotions through creativity;
-  Social training – to develop communication skills;
-  Social adaptation and habilitation – support for integration into society;
-  Social reintegration – assistance in returning to active social life;
-  Cooking therapy – developing independence skills through cooking;
-  Neurosensory integration – to harmonize the nervous system.
