

Our new educational platform, Areci, is scheduled to launch next week at **areci.am**. Its name means “I did it,” reflecting the sense of achievement we want students to experience as they learn.

Areci is an AI-powered platform where students explore themed worlds and complete educational quests. These quests use gamified elements to encourage participation, while each task requires students to think, analyze, and solve problems. We have completed 21 worlds, with 15 more nearing completion ahead of the launch.

Mathematics Olympiad Training

On September 1, we launched our Mathematics Olympiad training program for students in grades 8–12. Currently, 71 students participate across four groups. The program aims to strengthen their mathematical reasoning and problem-solving skills and prepare them for national and international Mathematics Olympiads.

Following the success of last year’s AI Olympiad training program, we also plan to resume these sessions with an updated schedule.

Together, these initiatives expand opportunities for students to develop their skills through engaging learning experiences and focused Olympiad preparation.
