**BMDC COMMENT.** Findings show that only energetic people in the community can access the only source of water due to the fact that it's about 4.5 km distance. Those who can not manage to walk this distance, to resort to using swampy water which is also used by crowing and grazing animals. This has subjected residents to water borne related diseases the community health officer stated.

It is from the above findings that BMDC management took a decision to recommend a clean water project for this community.
