MEDICAL CONSULTS REPORT

**FOR CHILDREN
WITH CANCER**

MEDICAL CONSULTATIONS PROGRAM

48% of the cases treated in the program are leukemias, whose treatment can last up to two and a half years.

This proposal seeks to fund specialized medical consultations, which are essential for diagnosis and follow-up, and are provided by the only pediatric oncologists in the country.

Each consultation represents:

Clinical diagnosis and evaluation of test results

Prescription of chemotherapy and supportive medications

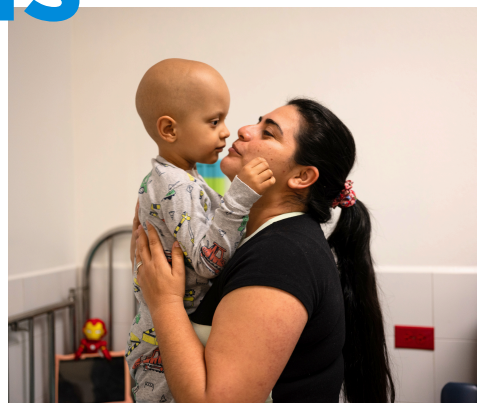

Review of imaging studies

Comprehensive care (psychology, nutrition, pain management)

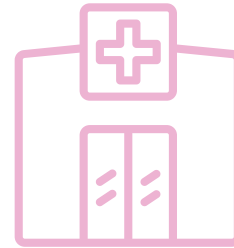

Emotional support and direct communication with the family

WHY DONATE MEDICAL CONSULTATIONS?

With your support, we will be able to benefit 1,500 patients.

In El Salvador, the average cost of a medical consultation with a specialist is \$45.00.

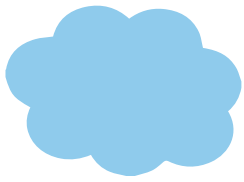

A patient with Acute Lymphoblastic Leukemia (ALL) will require approximately 30 to 35 medical consultations over the two years of treatment.

93% of our patients live in poverty, making it impossible for them to afford treatment.

I'm Samantha

AND THIS IS MY STORY

Carol Vásquez, Samantha's mother, shares her experience navigating her daughter's cancer journey. Samantha was diagnosed two years ago with a Wilms tumor in her right kidney and has recently had to restart treatment due to a relapse detected in her lungs.

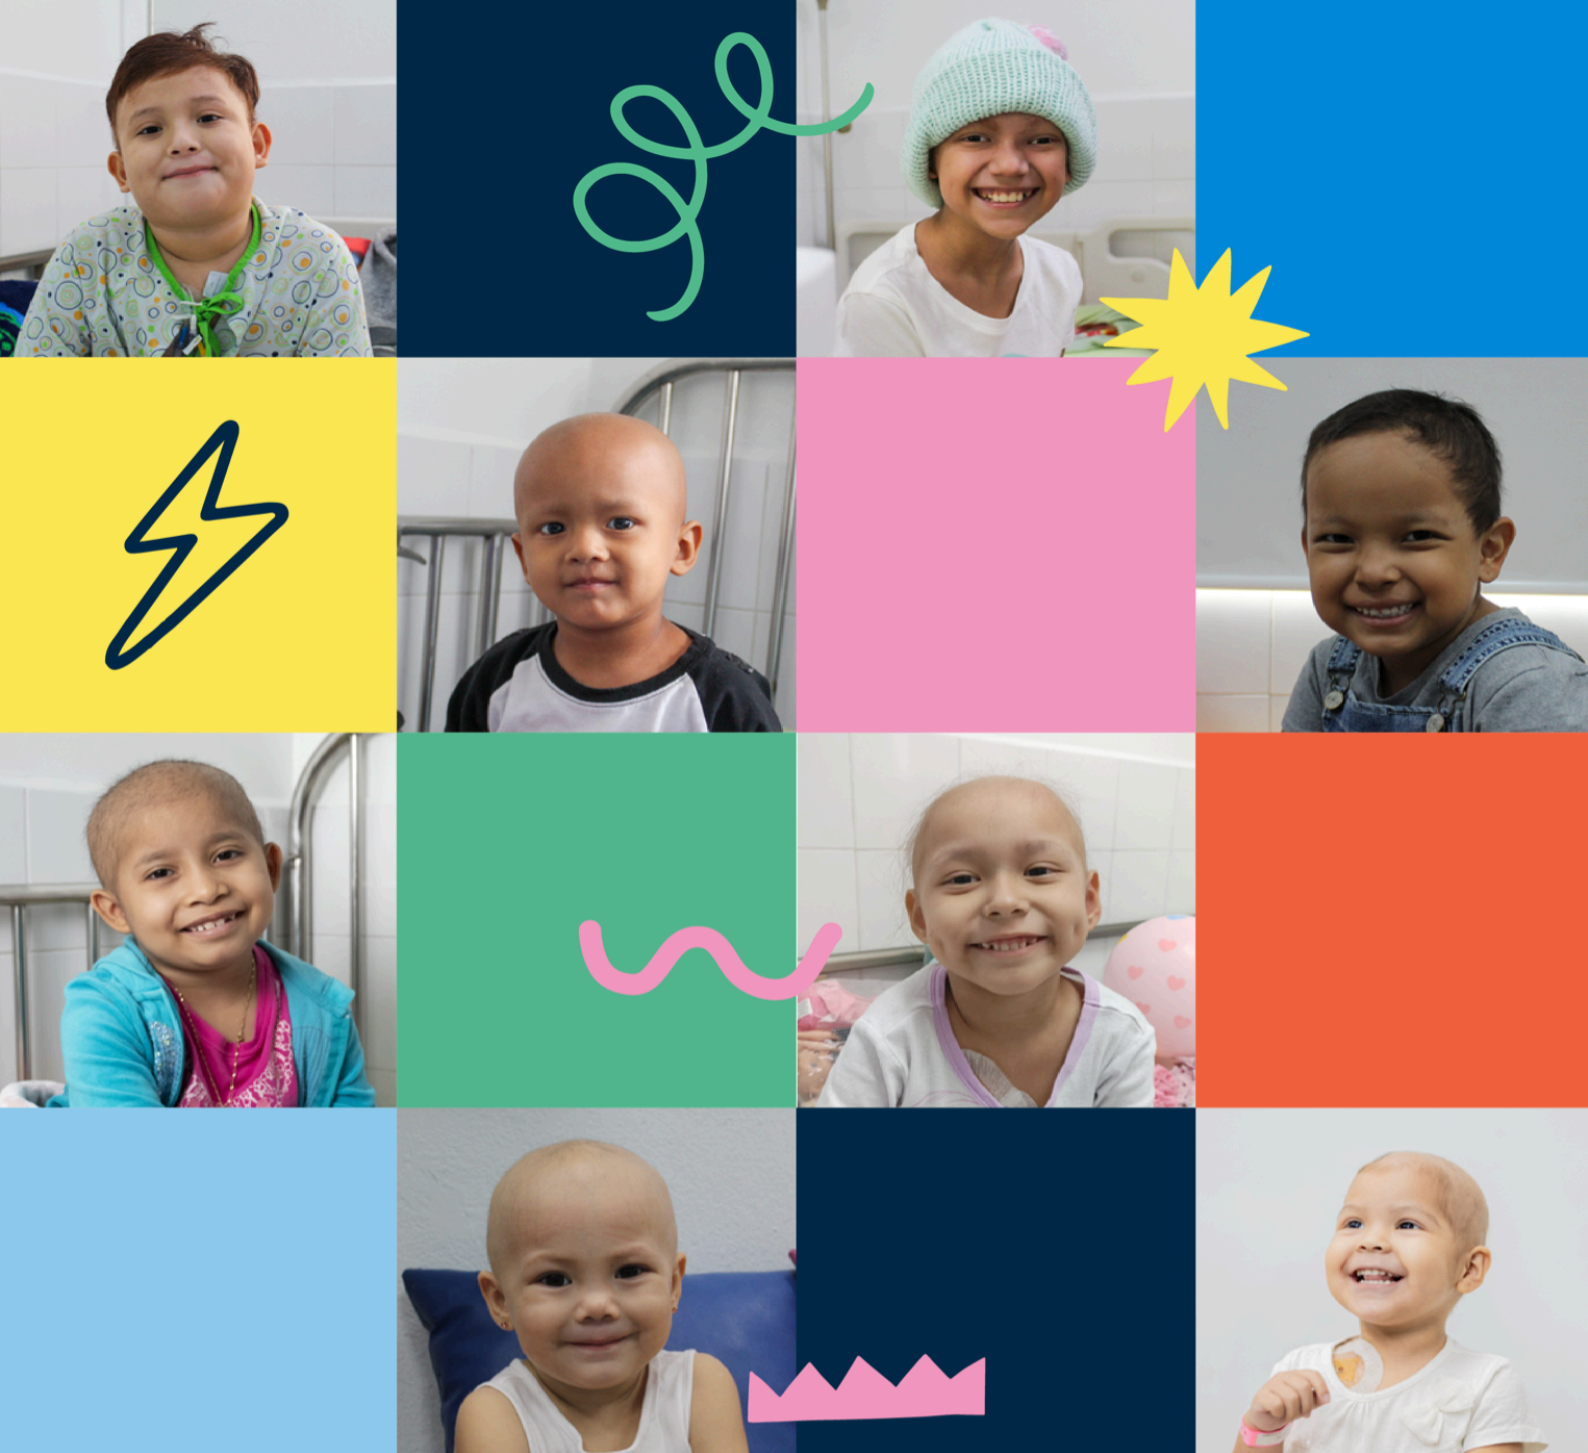

Samantha's initial symptoms included pink-colored urine, which led doctors to believe she had a urinary tract infection. After completing antibiotic treatment with no improvement, she was taken to a private hospital, where an ultrasound and CT scan were performed. The results were concerning, and the family decided to transfer her to the Benjamín Bloom National Children's Hospital to continue her care.

When the diagnosis was confirmed, Samantha's mother recalls being in shock and finding it very difficult to accept the news. However, she is grateful for the swift response of the medical team, who immediately performed surgery and began chemotherapy shortly afterward.

In November 2025, during a follow-up CT scan, doctors detected spots in Samantha's lungs, requiring them to resume treatment with stronger medications to eliminate any remaining cancer cells.

For Samantha's family, receiving treatment at the Medical Center of Fundación Ayúdame a Vivir has been a true blessing. They recognize that their journey would have been very different without access to the necessary medications and the comprehensive care provided.
