

## “Empower Women Scientists in Developing Countries”

### Project Activities

- Launch an international call for applications and select ten outstanding women scientists through a transparent, merit-based process.
- Support each women scientist with a maximum of €10,000 grant to undertake a 3–6 months research stays at leading research institutions in Spain.
- The grant will cover travel, visa application, health, accident and civil liability insurance, accommodation and living expenses.
- Share the stories and achievements of the grantees through our website and social media, inspiring public engagement and trust in science.
- Organize an online event where grantees present their experiences and results to their community and donors.

### How You Can Help

Your donation will directly fund the next generation of women scientific leaders in developing countries. Every contribution, large or small, brings us closer to our €100,000 goal and helps ensure that science in those countries continues to thrive and benefit society as a whole. Together, we can turn talent into progress and hope into impact.

- “Apadrina la Ciencia” is led by scientists who best understand the needs and challenges of the research community.
- We guarantee a transparent and fair selection process, with external evaluation to ensure impartiality.
- Funds are allocated based on excellence and potential impact, optimizing the scientific careers of women scientists and the quality of their research projects.
- We are committed to maximizing the impact of every euro, supporting projects that will benefit both the scientific community and society.
