Palliative Care

**We are committed to
providing the best care
possible.**

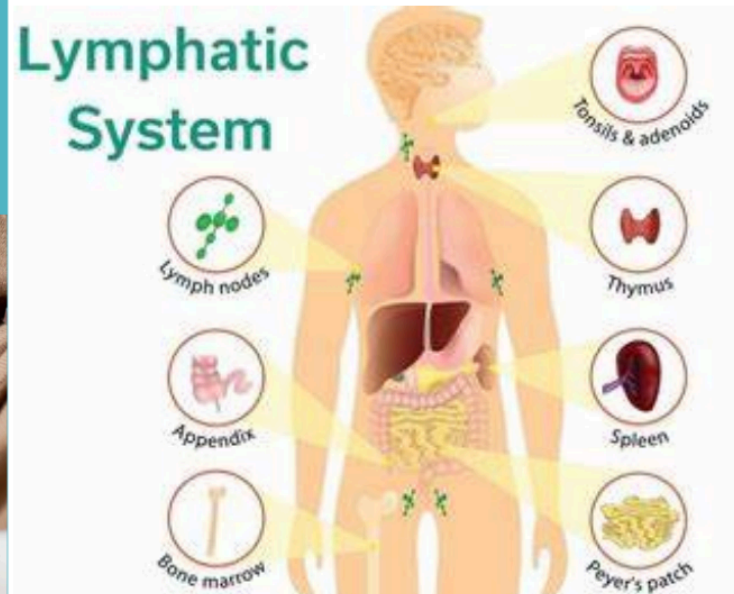

Palliative Care

At the ABC clinic, we view palliative care as a compassionate way to improve the quality of life for patients and families dealing with serious illnesses. Guided by Christian values, we work to ease suffering—whether it's physical, emotional, social, or spiritual—through early identification and treatment of pain and other challenges.

Our goal is to provide comfort and support in a caring environment while upholding dignity and quality of life when dealing with serious illness. Everyone, no matter their age, income, or condition, should have access to basic health services, including palliative care. We believe that care for the poor and marginalized reflects God's love for all.

Lymphatic System

Lymphedema

Lymphedema is a chronic lymphatic disease that results in disfiguring swelling in one or more parts of the body. It can be hereditary (primary lymphedema) or it can occur after a surgical procedure, infection, radiation or other physical trauma (secondary lymphedema).

In breast cancer patients, lymphedema can develop in the arm on the same side as the cancer after lymph nodes are removed from the armpit. Primary Lymphedema often occurs in the lower extremities.

Lymph is a protein-rich fluid that builds up when the lymphatic system, responsible for fluid transport, is damaged.

The team at ABC Health Center is happy to provide you with the right treatment and explanation. Together we will look at how the lymphedema affects your life, deploy weekly treatment and how you can treat the lymphedema at home.
