

MOBILE HOSPITAL BUS PROJECT

Bringing essential healthcare closer to underserved communities

FUNDRAISING GOAL

US\$190,000

PROJECT PURPOSE

Accessible, community-based healthcare

TAGLINE

Better Care, Better Tomorrow

Royal Care Foundation (RCF) is developing a mobile healthcare service that can travel to communities where distance, cost and limited access make routine and preventive healthcare difficult. The bus will function as a mobile clinical platform for outreach, screening, basic diagnostics, referral and health education.

1. Executive Summary

The Mobile Hospital Bus Project is a practical response to unequal access to healthcare. Instead of requiring every patient to travel to a major health facility, the project takes a package of essential services closer to communities. The mobile clinic will support scheduled community outreaches, screening days, health education, basic testing, early identification of health risks and referral to appropriate facilities for treatment and follow-up.

RCF is seeking **US\$190,000** to establish and equip the mobile healthcare bus and provide the initial resources required to operate it safely and effectively. The fundraising campaign is designed to attract individual donors, foundations, corporate partners, churches, health-sector partners and other supporters who believe that quality healthcare should be closer to the people.

US\$190,000	6 CORE SERVICE AREAS	COMMUNITY OUTREACH
Fundraising target	Integrated mobile services	Screening, education & referral

Why a mobile model?

- **Reaches people where they live:** services can be scheduled in underserved and hard-to-reach communities.
- **Promotes prevention:** screening and early identification can help people seek care sooner.
- **Reduces access barriers:** communities can receive several services during a coordinated outreach.
- **Strengthens referrals:** clients needing additional care can be linked to appropriate health facilities.
- **Supports health education:** community members receive practical information alongside clinical services.

2. The Need We Are Addressing

For many families, access to healthcare is influenced by more than whether a health facility exists. Travel distance, transport costs, limited information, waiting time, household responsibilities and fear of discovering a health problem can all delay care. These barriers are especially important for preventive services, where early action can make a major difference.

The project responds through four connected approaches

ACCESS	Bring essential services closer to communities through scheduled mobile outreaches.
PREVENTION	Promote screening, health education and early identification of health risks.
LINKAGE	Refer clients who require additional diagnosis, treatment or specialist services.
CONTINUITY	Work with community health structures and health facilities for follow-up and care navigation.

Who will benefit?

The project is intended for underserved and vulnerable populations, including women and children, older people, young people and families who face barriers to accessing preventive and basic healthcare. The exact outreach locations and schedule will be determined through community mapping, local health priorities and coordination with relevant authorities and health facilities.

3. What the Mobile Clinic Will Provide

GENERAL CHECKUPS	Basic health assessment, vital signs, health advice and identification of clients who need further care.
LABORATORY TESTING	Selected point-of-care and basic laboratory services to support screening and clinical decision-making.
CANCER SCREENING	Community-based screening and education, with referral for clients requiring further assessment.
MATERNAL & CHILD HEALTH	Health education, maternal and child health support, screening and referral/linkage to appropriate services.
MENTAL HEALTH COUNSELING	Basic psychosocial support, mental health awareness, identification of concerns and referral when needed.
EMERGENCY MEDICAL SUPPORT	Initial support and stabilization within the team's scope, followed by referral to an appropriate health facility.

Important: The mobile clinic is not intended to replace hospitals or established health facilities. It is designed to extend access, support prevention and screening, and strengthen referral and linkage to care.

4. The Mobile Clinic Bus

The proposed mobile clinic bus is designed as a visible, professional healthcare platform that can travel to community locations. Its clinical fit-out will be developed around safety, privacy, infection prevention, workflow, basic diagnostics, secure storage, power and reliable communication.

How an outreach day can work

1. Community mobilization and registration.
2. Basic assessment and triage.
3. Clinical consultation and appropriate testing/screening.
4. Health education and counseling.
5. Referral/linkage for clients who need additional services.
6. Documentation, follow-up planning and reporting.

5. Implementation Approach

The project will be implemented in phases so that the bus, equipment, team, community systems and referral relationships are ready before full-scale outreach begins.

1. Preparation	Finalize vehicle acquisition/fit-out, technical specifications, licensing and operational procedures.
2. Equipping	Install clinical equipment, basic diagnostics, storage, power, communication and safety systems.
3. Partnerships	Coordinate with county health structures, health facilities, community health actors and other partners.
4. Pilot Outreach	Conduct initial outreach days, test workflows, gather community feedback and improve the model.
5. Scale & Learn	Expand outreach coverage, monitor results, document lessons and strengthen referral pathways.

Monitoring & learning

RCF will track outreach activities, people reached, services delivered, screenings conducted, referrals made, linkages completed, follow-up activities and community feedback. Data will be used to improve service quality and demonstrate accountability to communities, partners and donors.

6. The US\$190,000 Investment

RCF is seeking **US\$190,000** to establish the mobile hospital bus and support the resources needed to launch a safe, functional and sustainable service. The detailed procurement budget can be developed with prospective partners and donors based on vehicle specifications, equipment quotations and regulatory requirements.

FUNDING AREA	WHAT IT ENABLES
Vehicle & specialist fit-out	Mobile clinical space, partitions, patient flow, electrical/power and safety systems.
Medical & diagnostic equipment	Clinical examination, screening and basic diagnostic equipment.
Laboratory capacity	Selected testing equipment, consumables, storage and infection-prevention supplies.
IT & digital health	Data capture, communications, connectivity and secure records/workflow tools.
Community outreach	Mobilization, health education, screening events and community engagement.
Operations & maintenance	Fuel, servicing, insurance, supplies and other essential operating requirements.
Monitoring & accountability	Data systems, reporting, quality improvement and donor/community accountability.

HELP US REACH US\$190,000

Every contribution helps bring healthcare closer to people who need it most.

7. Partnership & Call to Action

This project is designed to grow through partnership. RCF welcomes support from donors, foundations, corporates, health-sector organizations, government partners, faith-based organizations and community groups. Partners may support the bus, medical equipment, specific services, outreach days, diagnostics, fuel and maintenance, digital health systems, or community health education.

Ways to support

PARTNERSHIP OPTION	HOW YOU CAN HELP
FINANCIAL GIFT	Contribute toward the US\$190,000 project goal.
EQUIPMENT SUPPORT	Provide or sponsor appropriate medical, laboratory, IT or safety equipment.
PROGRAM PARTNERSHIP	Support screening, maternal and child health, mental health or community outreach activities.
TECHNICAL SUPPORT	Contribute expertise in mobile health, digital health, clinical services, monitoring or vehicle systems.
REFERRAL PARTNERSHIP	Strengthen pathways between the mobile clinic and established health facilities.
