

Fund 1,000 Health Visits for Families in Ecuador

GlobalGiving Project Brief | Nivaly Health Access Inc. | 2026

Project Goal: \$20,000

Up to 1,000 affordable medical and mental health visits in Ecuador at an average cost of about \$20 per visit.

PROJECT OVERVIEW

Nivaly Health Access Inc. is a Florida 501(c)(3) nonprofit expanding affordable medical and mental health access for children and families in Ecuador. This project will subsidize care delivered by locally licensed doctors and psychologists, helping families receive services they might otherwise postpone because of cost while creating paid professional opportunities for local providers.

THE PROBLEM	OUR SOLUTION
Many families delay preventive, medical, or psychological care because private consultations can be difficult to afford. Delayed care can allow manageable concerns to become more serious. At the same time, young licensed professionals need meaningful paid opportunities to build experience and continue serving their communities.	Nivaly uses donor funding to subsidize medical and mental health visits in Ecuador. Care is provided through local professionals and community-based activities, with preventive services, consultations, psychological support, and follow-up when needed. The model connects affordable care for families with paid opportunities for qualified Ecuadorian providers.

CURRENT MOMENTUM

76+	50+	58+	45+	8
Medical consultations	Psychological appointments	People served	Donations received	Recurring donor plans

WHO THIS PROJECT SERVES

Primary beneficiaries: children and families in Ecuador who face financial barriers to timely medical or mental health care.

Secondary impact: locally licensed doctors and psychologists receive paid opportunities to build experience and serve their communities. The project can support both clinic-based care and community outreach in areas such as Quito and Churoloma.

HOW THE PROJECT WORKS

A simple, accountable model designed to turn donations into completed health visits.

1. IDENTIFY NEED	2. CONNECT TO CARE	3. SUBSIDIZE THE VISIT	4. FOLLOW UP & REPORT
Families are connected through Nivaly, local clinical partners, or community activities.	A locally licensed doctor or psychologist provides the appropriate service.	Donor funding reduces or covers the cost of the consultation, averaging about \$20 per visit.	Nivaly tracks appointments, follow-up needs, and program activity to measure impact and report responsibly.

ILLUSTRATIVE \$20,000 PROJECT BUDGET

Planned Use	Amount	Share	Illustrative Impact
Medical care subsidies	\$10,000	50%	Approx. 500 visits
Mental health care subsidies	\$8,000	40%	Approx. 400 visits
Preventive/community and follow-up care	\$2,000	10%	Approx. 100 visit-equivalents
TOTAL	\$20,000	100%	Up to 1,000 health visits

Planning note: The final mix of medical, mental health, preventive, and follow-up visits may shift with patient demand. The project is modeled at an average cost of approximately \$20 per completed visit.

EXPECTED OUTCOMES	LONG-TERM SUSTAINABILITY
• Up to 1,000 subsidized health visits • Earlier access to preventive and mental health care • Better continuity through appropriate follow-up • More paid service opportunities for local providers • Clear donor impact tied to completed care	Nivaly is building a diversified model based on recurring donors, grants, community partnerships, and local provider networks. As funding grows, the same structure can support more families, expand preventive programs, and create additional paid opportunities for Ecuadorian doctors and psychologists.

ACCOUNTABILITY

Nivaly uses structured appointment and contractor records to document service delivery and supports financial tracking by funding source. This allows the organization to connect donor and grant funds to program activity, maintain clear records, and communicate results as the project grows.

\$20 can help fund one health visit. Every completed consultation moves Nivaly closer to a future where families do not have to delay care because of cost.
