Chiquinivalvo Zinacantan, Chiapas, México

“Microsystems of organic gardens” is a sustainable and horizontal Community Project to produce food in order to reduce malnutrition in 31 children between 0-5 years old. The project will work in the community of Chiquinivalvo Zinacantan, Chiapas, Mexico by installing family gardens within household with malnourished children. The gardens will use natural resources for subsistence, such as rain water and compost. The families will work on their own, and they will develop core capacities about gardening and composting. Also the project will include nutritional education to raise awareness about the importance of a healthy diet by giving 5 workshops.
